

GROUP 1:
What are some of
the places you
have seen
flooding?

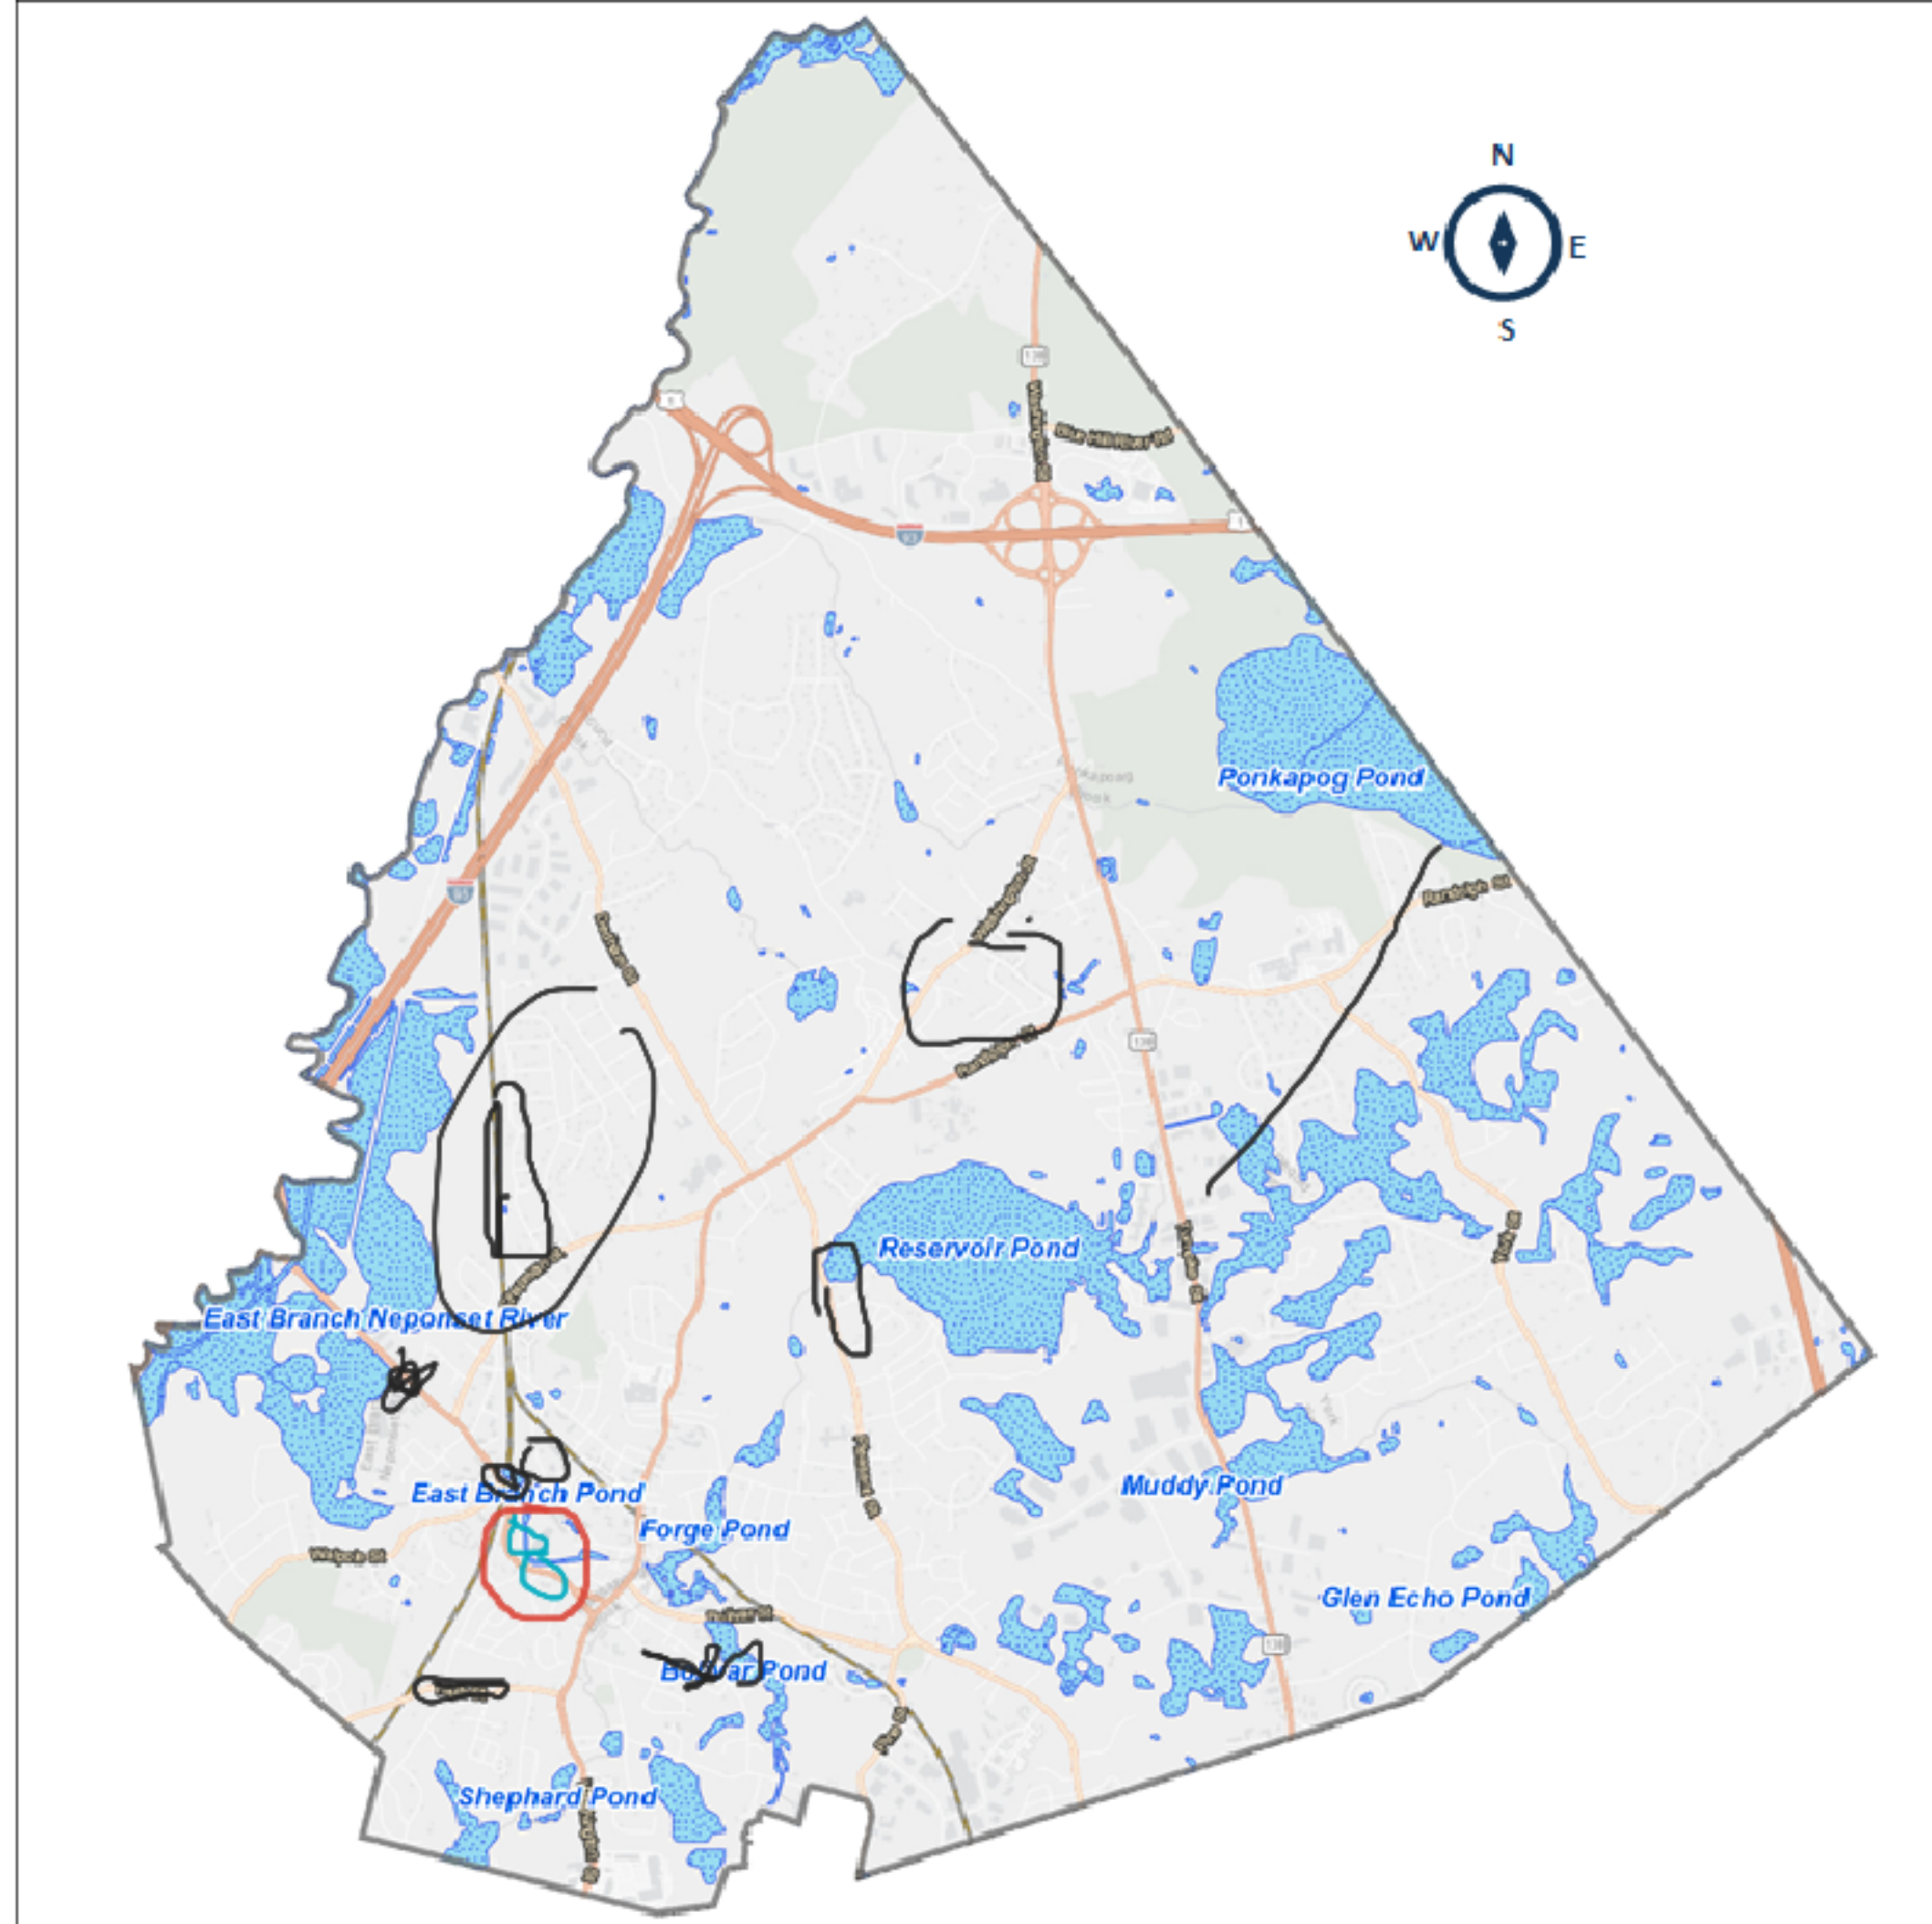

Neponset over by
Dunkin
Donuts/Sunoco

my
basement

Neponset
Street and
Norfolk
Street.

Washington St
near High St.

Revere St.
by the RR
bridge

What resources do you rely upon regularly?

Who/what do you depend upon during a time of crisis?

Has COVID emphasized any resources in particular?

Have you experienced an inclement weather event that caused you to need the assistance of a community resource? (What was the weather event?)

October 2020 windstorm - knocked out my internet and wifi for 17 hours. A friend let me use her guestroom so I could work.

Snowplows

Friends with a generator!

Neponset Street in the winter to get to Washington for the train is always a challenge. The sidewalks aren't plowed very well, and they are in the shade. Dangerous to walk on them. In 2015, I drove less than a mile to the train station for 2

I don't want to jinx myself, but I never lose power! Also I live in a condo so our lot is plowed

We lose power a lot due to wind and snow, sometimes out for days. Fire Department and Utility companies have been very responsive. Much appreciated

Friends and neighbors

Flooding on Neponset/Norfolk intersection a few years ago - I was walking home and ended up walking through water up to my knees to cross the street to my driveway. (Catch basin was blocked.)

Wind event brought down branches. Town employees assisted

Tree companies

Town employees/DPW after wind storm - tree loss

Nature-Based Solutions

How can persuade more folks to not chop down some of the lovely large trees in our neighborhoods?

Any natural solutions for neponset street, Dunkin' Donuts area?

Trees, trees, trees wherever possible

Gardening and landscaping ideas for residents.

Look to some green initiatives in other countries to encourage us to do them, too.

If a small tree is being removed from a yard, can we encourage offering it for "adoption" to another yard rather than chopping it down?

Working with local contractors: driveway installers, landscapers

Community Resilience Programs

Education around climate change communitywide

Youth groups - Girl and Boy Scouts - getting them involved.

Churches

Offer programming to the library to educate the community, in addition to the town information

Infrastructure Improvements

Can the power lines be buried so people don't keep losing power?

I would like to see power lines placed underground to keep them from blowing down in storms

bury utilities

Building Adaptations

Do any municipal buildings need generators as back up?

All new buildings built to meet latest enviro standards

Financial incentives to build green

Residents could use more information on who to contact to make improvements to protect their properties

Deconstruction of sites following green standards
